# DEMOGRAPHICS

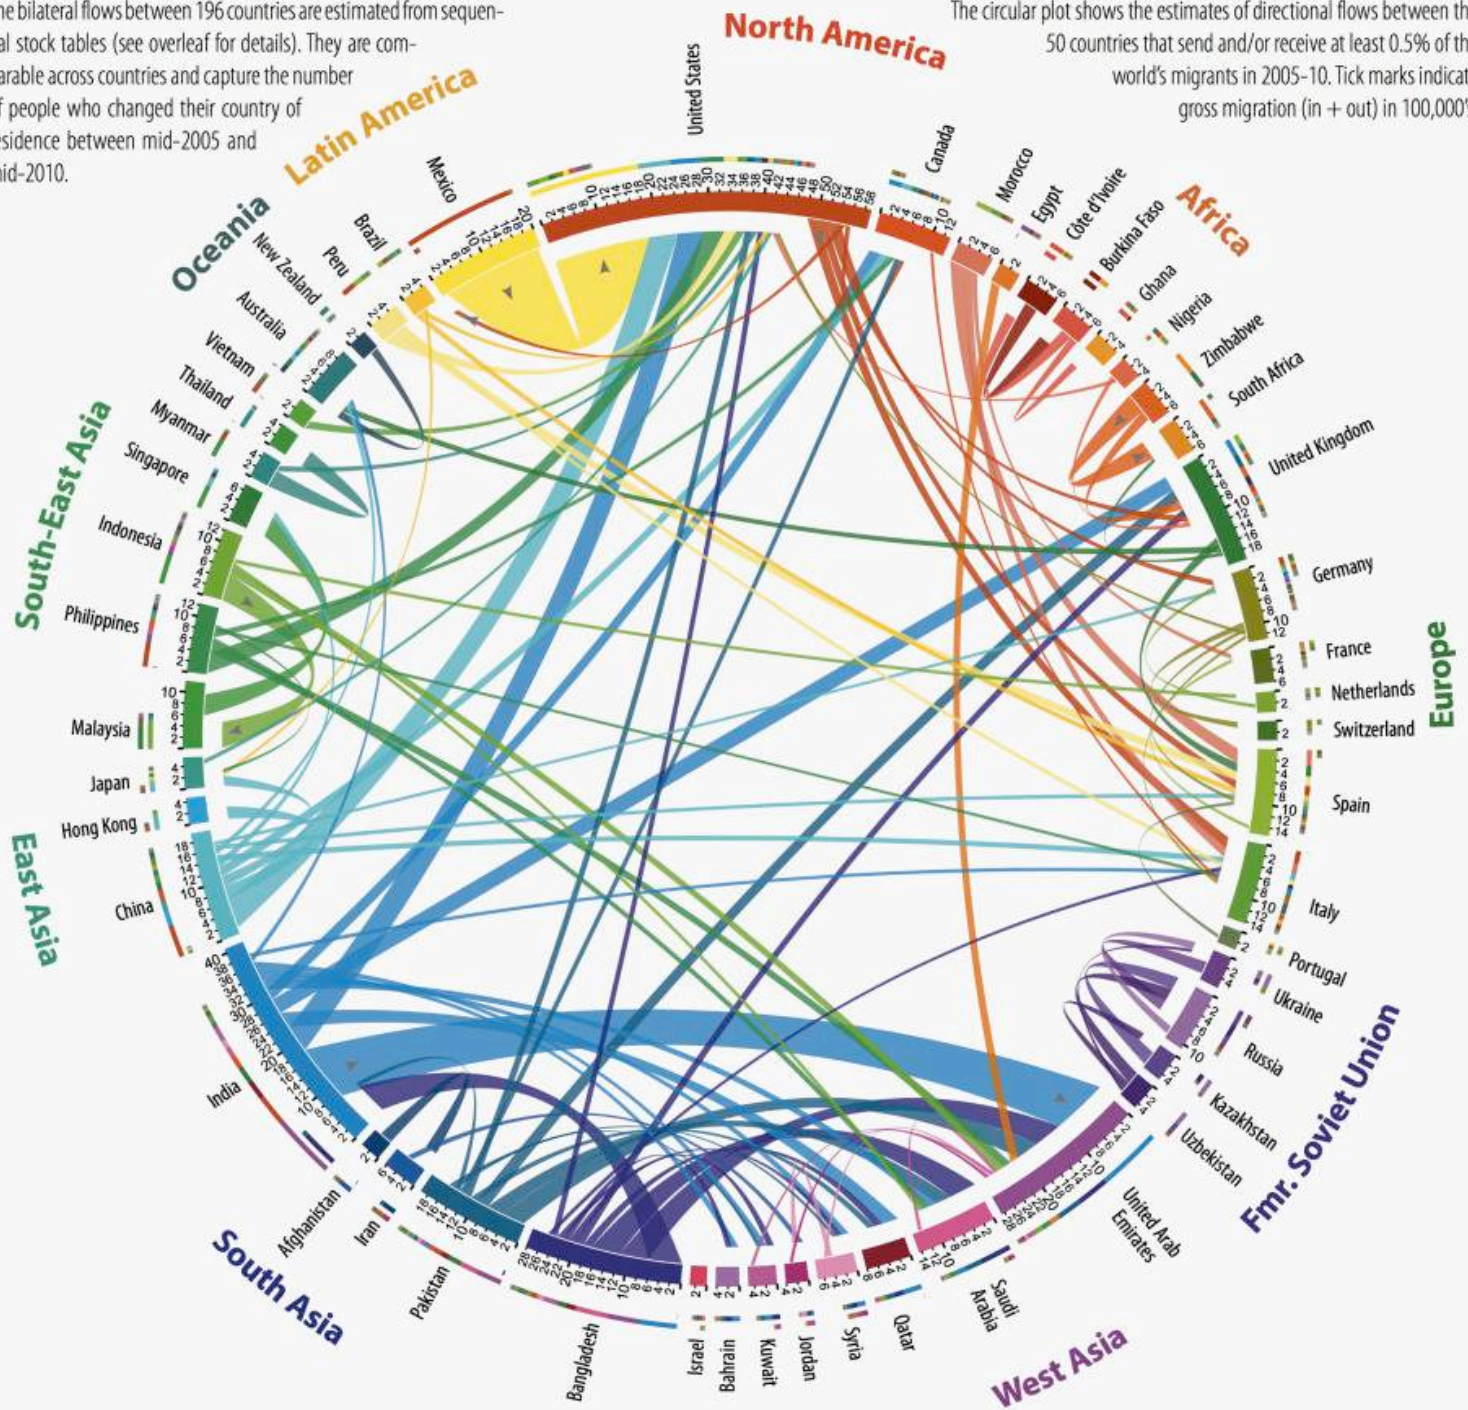

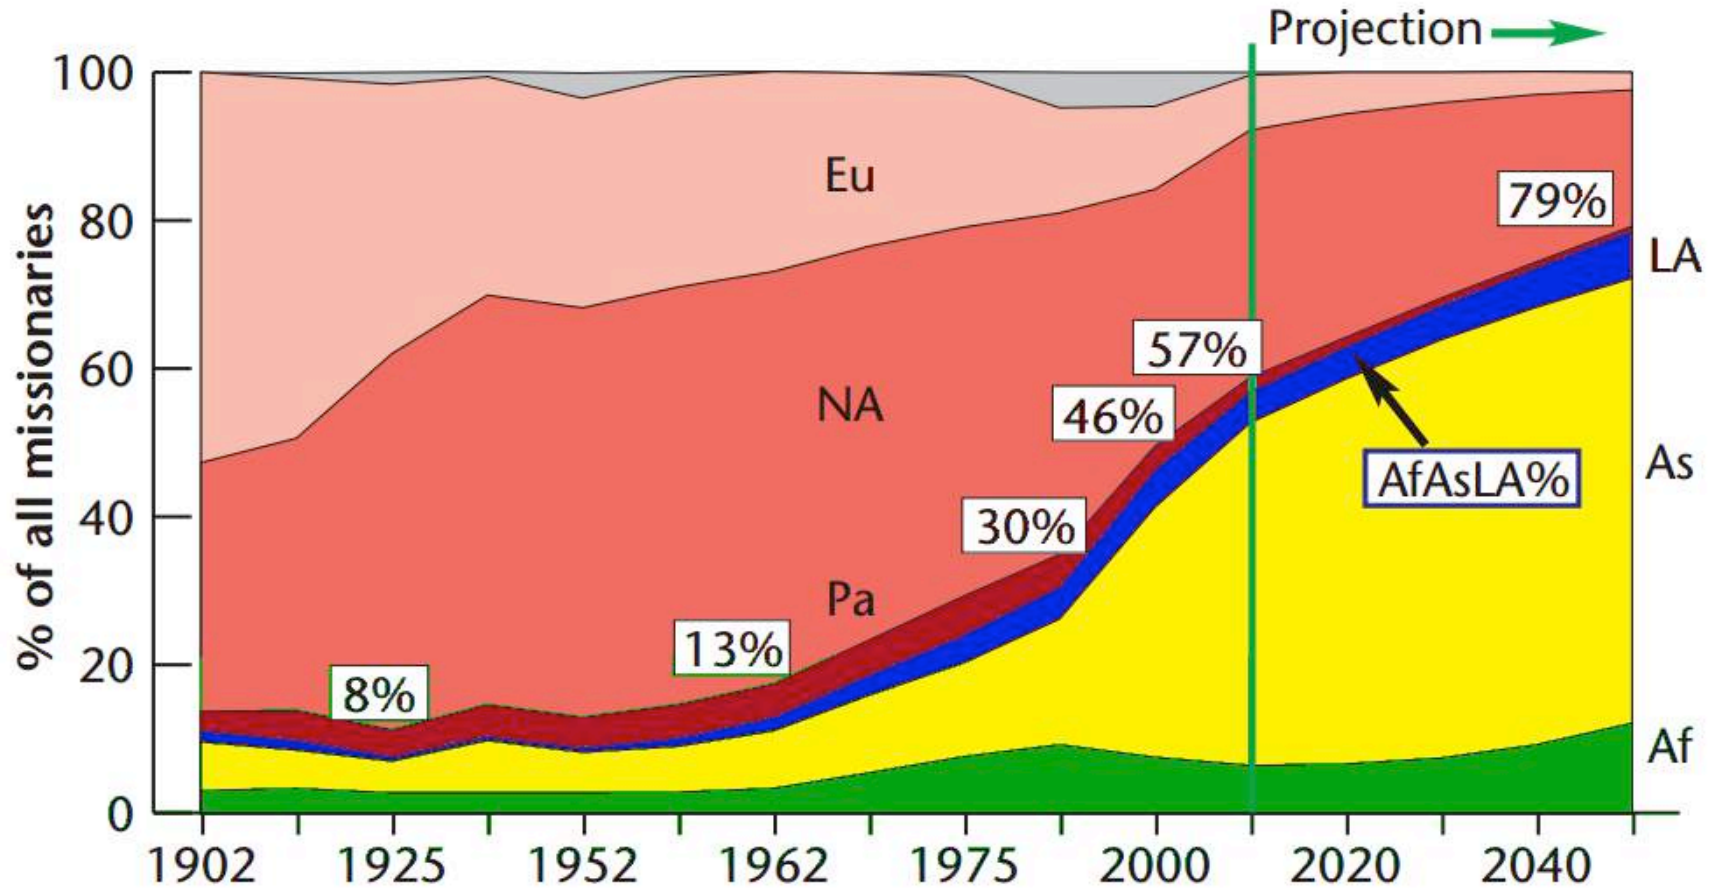

The bilateral flows between 196 countries are estimated from sequential stock tables (see overleaf for details). They are comparable across countries and capture the number of people who changed their country of residence between mid-2005 and mid-2010.

# Absolute number of people living in absolute poverty (1820-2011) globally – By Max Roser

The absolute poverty is defined as living with less than \$1.25/day. This is measured by adjusting for price changes over time and for price differences between countries (purchasing power parity (PPP) adjustment). Estimates post 1981 are based on World Bank data. Earlier data are based on Bourguignon and Morrison (2002).

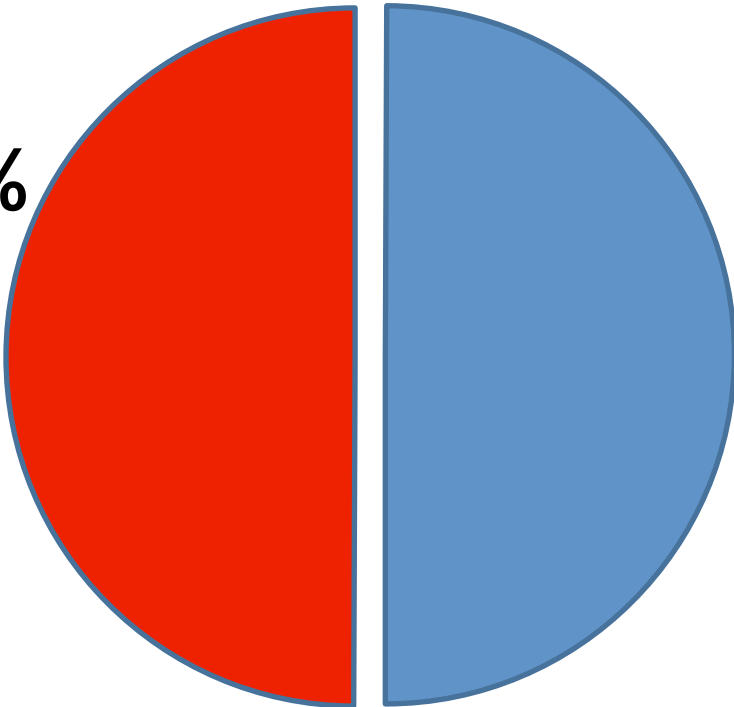

Data source for poverty: Bourguignon and Morrison (2002) until 1970 and World Bank data from 1981. Data source for population: OurWorldInData.org

The interactive data visualization is available at [OurWorldinData.org](https://OurWorldinData.org). There you find the raw data and more visualizations on this topic.
